

ABSTRACT

This new and unique method and apparatus is used for recording speeches, lectures, conversations, etc. It also consists of a method for capturing slides, displays, objects, writings, films, diagrams, equations such as in mathematics, physics, chemistry and calculus through the help of a detachable Tele-cam. It is interconnected to a digital master memory power, which enables it to retain information so that its users can access desired information and print them out later. The front is layered with super high-powered amplifiers and microphones, which makes it easy for it to capture speeches, lectures, conversations, etc. from a distance. It is interconnected to digitally compress international language dictionary library memory power, which enables it to capture speeches, lectures, etc. And print them out in any international language of the world that are used in the classrooms.
